SUMMARY REPORT
PLANNING FOR A PRACTICE-BASED DATA SYSTEM
Barbara Starfield, M.D.
July 1984

"Medical information science is the hybrid child of medicine and those logical sciences that are supported by computer technology. This logical challenge is more important than the technology itself".

(Lincoln and Korpman. Science, 1980)

This report summarizes the outcome of a project carried out in the academic year 1983-4 with the support of the William T. Grant Foundation and the Commonwealth Fund. The purpose of the project was to summarize previous work on the development of data systems to support research to improve knowledge about the provision of office-based care, and to initiate discussions with representatives of organizations interested in contributing to a long-term effort of collaborative research in office-based practice. The outline of this report is as follows:

1986: A Network is Born!

And, as newborns do, its CRPN!

- AAP Executive Committee creates Collaborative Research Practice Network (CRPN), 1986
- 1st CRPN Steering Committee meeting: June, 1986
- 1st CRPN Chapter Coordinator meeting November, 1986

Accomplishments:

PROS thru 2016 has involved:

- >30 studies
- >700 practices
- >1,700 pediatricians
- >30 large-scale primary care-based studies
- >60,000 study participants (children, teens, parents, and clinicians)
- >100 publications
- Examples of impact on policy and practice:
 - Girls' Puberty Study
 - Secondary Sexual Characteristics in Boys
 - Febrile Infants
 - Childhood obesity treatment
